ARIC (970) 629-1818 | STACY (970) 629-2468

WELCOME!

Welcome to our 2024 Private Treaty Bull Sale! We are very excited about this year's offering, representing the best of forty years of PAP tested Angus genetics. You will notice many of our genetics trace back to our original 4-H heifers, including Friona and Windy families.

As fifth and now sixth (Torin) generation, Moffat County ranchers, we are committed to providing you with high quality Angus bulls, that profit in our high desert environment. As a family operation, the docility of our cattle and bulls are very important to us.

While we focus on multiple traits, 65% of the bulls offered in this sale meet the Certified Angus Beef (CAB) Targeting the Brand Genetic Requirements. This emphasis on carcass quality traits, such as marbling, rib eye area and feed efficiency, provides our seedstock customers and consumers with a consistent, healthy, and sustainable product to enjoy. All bulls have been DNA tested through ANGUS GS and have updated Genomic Enhanced EPD's and increased accuracies. Additional information on their Neogen rankings can be found at our website, www.5barangus.com

About Our Bulls

We run our cows and calves in the NW Colorado high desert at 6500-8000 feet. Bull calves were weaned on 9/16/23 and fed a complete ration of alfalfa/grass mixed hay, cracked corn and dried distillers grains (DDG). On 12/6/23 bulls were moved to Olathe CO to continue developing throughout the winter, where they will be until April 1, 2024, then brought back to Craig.

PAP Testing

Bulls were PAP tested in Olathe CO on 12/28/23, by Dr. Tim Holt at 5460 feet. We have been PAP testing with Dr. Holt for over 30 years and providing PAP testing data through our Angus Herd Improvement Records (AHIR), to build the accuracies of our PAP EPD's.

Delivery

Bulls will be brought back to Craig, CO appx. April 1, 2024, where they will be fertility and Trich tested. Arrangements for pickup and delivery will be made at that time.

Terms & Conditions

A \$500 non-refundable deposit will be collected to hold your bulls until pickup or delivery, at which time it will be applied to your purchase price.

Health

Complete vaccination program at branding and weaning includes Bovishield Gold 5, Once PMH IN, Vision 8 w/Somnus.

Poured with Ultra Saber or Clean Up II

In addition all bulls receive two doses of the following throughout the winter and spring:

- *Normectrin Plus Injection Wormer
- *Pinkeye with Moraxella Bovoculi Bacterin
- *Fusoguard
- *MultiMin 90
- *BVD-PI Negative

All bulls have been DNA tested through ANGUS GS to provide the most accurate genomic enhanced EPD's

Sight Unseen Purchase

We will be glad to help you in making your purchase with your satisfaction guaranteed. Please feel to call for more information.

EPDs & Pathfinders

EPDs are current as of January 21, 2024. Registration Numbers are linked to AAA website for most current EPD's. Pathfinder sires and dams in pedigrees are indicated by the # mark.

Supplemental Data at www.5barangus.com

Supplemental Data is available on our website and will be updated with prices, availability, yearling weights and scrotal measurements.

Retained Interest

We reserve the right to retain interest on any bull.

ANGUS GSSM

Powered by Neogen GeneSeek

FOR ANGUS. BY ANGUS.

Created by Angus Genetics Inc. (AGI) and powered by Neogen GeneSeek, our sale cattle have been tested with the first DNA profile designed specifically for Angus cattle, Angus GSSM.

Each marker is intentionally chosen from the Angus genome to drive the Angus breed into the future. It offers maximum accuracy for genomically enhanced EPDs at great value. Testing heifer and bull calves ultimately allows you to reap the benefits of faster genetic gain in your commercial herd. With Angus GS, it's all about you, our customer.

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

American Angus Association \$Value Indexes

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase weaning and maternal milk traits while also continuing to increase mature cow size.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of these cattle and eventually sell them on a quality-based carcass.
